

REDRING

VORTEX

INSTANT AV3S

AUTOSENSOR ELECTRIC HANDWASH

Installation and User Guide

IMPORTANT:

This booklet should be left with the user after installation and demonstration.

THIS APPLIANCE CAN BE USED BY CHILDREN AGED FROM 8 YEARS AND ABOVE AND PERSONS WITH REDUCED PHYSICAL, SENSORY OR MENTAL CAPABILITIES, OR LACK OF EXPERIENCE AND KNOWLEDGE IF THEY HAVE BEEN GIVEN SUPERVISION OR INSTRUCTION CONCERNING USE OF THE APPLIANCE IN A SAFE WAY AND UNDERSTAND THE HAZARDS INVOLVED.

CHILDREN SHALL NOT PLAY WITH THE APPLIANCE.

CLEANING AND USER MAINTENANCE SHALL NOT BE MADE BY CHILDREN DO NOT SWITCH THE APPLIANCE ON IF YOU SUSPECT THE APPLIANCE OF BEING FROZEN. WAIT UNTIL YOU ARE SURE IT HAS THAWED OUT.

SECTION 1

IMPORTANT SAFETY INFORMATION

- Your handwash unit has been designed for convenience, economy and safety of use, provided that it is installed, used and maintained in good working order and in accordance with our instructions and recommendations.
- **ALL WIRING AND INSTALLATION MUST BE SUPERVISED BY A SUITABLY QUALIFIED PERSON.**
- **THIS APPLIANCE MUST BE EARTHED.**
- The installation must be in accordance with the current edition of BS.7671 (*the 'IET Wiring Regulations'*) and 'Part P' of the '*Building Regulations*' in force at the time of installation. Installations outside England and Wales must also conform to any local regulations in effect
- This appliance is intended to be permanently connected to the fixed electrical wiring of the mains supply with its own dedicated supply.
- This appliance must **NOT** be fitted where it may be subjected to freezing conditions.
- Isolate the mains electrical and water supply before removing the appliance front cover.
- **DO NOT** fit any sort of tap or control on the appliance outlet.
- Take care to avoid restricting the outlet of the pressure relief device (fig.C).
If water is discharged from the pressure relief device, maintenance will be required before the appliance can be safely used.

SECTION 2

ADVICE TO USERS

The following points will help you have a greater understanding of how your handwash works:

- The electric heating element operates at a constant rate.
The required water temperature is achieved by adjusting the rate of water flow. The higher the water flow the lower the temperature and vice versa.
The temperature of the water supplied from the mains can vary considerably throughout the year from 5 to 20°C.
This means that in the winter, flow rate will be less than in the summer to achieve the same outlet temperature.
- Your handwash is designed to work within a range of water pressures, if the pressure falls below the minimum pressure required, it is likely that the pressure switch will turn off the power to the heating element, resulting in cold water being produced by the unit.
(see page 3 for details)

SECTION 3

HANDWASH INSTALLATION

Plan your own installation carefully. Check on the nearest and most readily accessible rising mains water supply.

The unit should be sited so that all the spray is contained in the sink (fig.A)

We recommend that a WRAS (Water Regulations Advisory Scheme) listed isolating valve is fitted into the mains cold water supply for servicing purposes.

WARNING:

ALL WIRING AND INSTALLATION MUST BE SUPERVISED BY A SUITABLY QUALIFIED PERSON.

DO NOT INSTALL THIS UNIT WHERE IT MAY BE SUBJECTED TO FREEZING CONDITIONS.

USE ONLY THE COLD RISING WATER MAIN SUPPLY.

DO NOT CONNECT THE HANDWASH UNIT TO THE DOWN SERVICE FROM A COLD WATER STORAGE TANK.

SECTION 4

PLUMBING CONNECTION

Plumbing the handwash unit must precede making electrical connections.

The handwash unit must be connected to the cold water supply with a minimum running pressure of 69 kPa (0.7 bar, 10 psi) and a maximum pressure of 690 kPa (7.0 bar, 100 psi).

Turn off the water supply at the isolating tap.

Before removing the front cover, using a coin or another suitable implement, check that the central sensor lens is turned fully anti-clockwise.

1. Remove the three screws securing the handwash unit cover and remove the cover complete with the central sensor lens.
2. Place the handwash unit on the wall and determine the entry position of the water inlet supply pipe.

Ø15mm copper, chrome polished or stainless steel pipe should be used.

Ensure that there are no burrs on the pipe.

In multiple handwash installations, correct pipe work sizes should be calculated to maintain adequate flow to each unit.

3. Mark the location of the fixing screws through the backplate (fig.B).

A 'keyhole slot provided on the top fixing hole to assist installation, and should be marked and drilled first to take the wall plugs and screws provided.

4. Tighten the top screw with head protruding about 10mm from the wall and hook the backplate over the screw head.

This allows for correct and accurate alignment of the handwash unit before fixing the bottom position.

You may not wish to tighten up both screws at this stage as the holes are elongated to allow for adjustment after other connections have been made

5. Before completing the connection of the water supply to the inlet of the unit, ensure you flush out the pipework to remove all swarf and system debris.
6. Connect the mains water supply to the inlet of the handwash unit using the relevant Ø15mm pipe.
Do not use excessive force when making the connection to the unit (fig.D).
7. It is permissible to use a WRAS (Water Regulations Advisory Scheme) approved sealant sparingly whilst avoiding excess finding its way into the handwash operating parts.

WARNING:

TAKE CARE TO AVOID RESTRICTING THE OUTLET OF THE PRESSURE RELIEF DEVICE.

SECTION 5

ELECTRICAL CONNECTION

WARNING:
THIS HANDWASH MUST BE EARTHED.

The electrical installation must be in accordance with the current BS.7671 (IET Wiring Regulations) and 'Part P' of the Building Regulations and/or local regulations

1. The handwash unit is designed for a single phase AC electrical supply.
2. Use 3-Core 1.5mm² double insulated cable.
The cable can be surface clipped, hidden or via conduit.
2. The incoming cable access to the handwash unit must be via the two bottom, the top, or rear channels provided in the backplate (fig.C)
3. Cut back cable (fig.E).
Connect cable to terminal block making sure that all the retaining screws are **VERY TIGHT** and that no cable insulation is trapped under the screws.
4. Ensure the cable clamp is used to secure the cable into position.

WARNING:
FAILURE TO COMPLY WITH THESE INSTRUCTIONS COULD RESULT IN FAILURE OF THE TERMINAL BLOCK

SECTION 6

FITTING THE SWIVEL ARM INTO POSITION

IMPORTANT: Fitting the swivel arm must precede fitting the front cover

1. Ensure the rubber 'O'-ring is located fully on the stainless steel pipe.
2. Slide the plastic retainer over the 'teeth' of the outlet until they 'click' into position (fig.F).

PLACE FRONT COVER ON UNIT WITH SLOT HORIZONTAL AND USING A COIN TURN CENTRAL SENSOR LENS ANTI-CLOCKWISE UNTIL RESISTANCE IS FELT. DO NOT USE EXCESSIVE FORCE!

REMOVE FRONT COVER AND TURN CENTRAL SENSOR LENS ANTI-CLOCKWISE TO ITS END-STOP, THEN REFIT COVER. DO NOT USE EXCESSIVE FORCE!

H

SECTION 7

FITTING THE COVER INTO POSITION

It is necessary to engage the central sensor lens in the correct position on the flow valve spindle before the front cover is finally located and secured.

1. Ensure the 2 x backplate fixing screws are fully tightened (fig.B).
2. Ensure that the flow valve spindle and the central sensor lens are correctly aligned (fig.H).

Refit front cover with slot in horizontal position, and using a coin or another suitable implement, turn the central sensor lens **anti-clockwise** until resistance is felt. **Do not use excessive force.**

Remove the front cover and turn the central sensor lens **anti-clockwise** to its end-stop. **Do not use excessive force.**

This will ensure a fast fill up of the handwash.

3. Refit the front cover with the 3 x fixing screws **take care** to ensure that internal components especially the PCB are not damaged (fig.G).

SECTION 8

COMMISSIONING PROCEDURE

1. Switch on the mains electrical supply at the isolating switch.
2. Ensure the water supply is fully on at the mains and the isolating service valve (if fitted) is fully open.
3. Using a coin or another suitable implement, turn the central sensor lens **fully anti-clockwise**.
4. Pass your hand in front of the central sensor lens to turn the handwash on.

The 'Power' LED indicator will illuminate when the unit is running.

5. Check that the water flows freely from the handwash within a few seconds.

The water from the patented 'Vortex' sprayhead will be at full force and at a cool temperature.

Check that water is not leaking from the bottom of the case.

6. Using a coin or another suitable implement, turn the central sensor lens slowly **clockwise**. This will gradually reduce the water flow.

Check that the water gets **warmer**,

Turn **anti-clockwise** and check the water gets **cooler**.

Wait a few moments for the temperature of the water to stabilise.

NOTE: When the water temperature is changed the flow rate alters.

7. Turn the central sensor lens so that the slot is in the horizontal position.

SECTION 9

OPERATING THE HANDWASH

1. The mains electricity and water supply should normally be left on.
The flow of the water is controlled by a tap, which is incorporated inside the unit.

2. To operate the handwash, simply pass your hand in front of the central sensor lens, it is also turned off the same way (fig.I).

The handwash will also automatically turn off after approximately 40 seconds (fig.I).

This will, in the majority of cases, provide a suitable temperature for washing hands.

However, in extreme conditions, i.e. mid-winter or mid-summer, the water temperature can be adjusted to suit.

- 3a. If the water is **too hot**, then increase the water flow by, **turning the central sensor lens anti-clockwise**

Wait a few moments for the temperature of the water to stabilise.

Repeat turning anti-clockwise until you get the water temperature of your liking.

- 3b. If the water **is too cold**, then decrease the water flow by, **turning the central sensor lens clockwise**, and continue as necessary until you get the water temperature of your liking. The final adjustment may be anywhere on the scale.
- 3c. Basically turning the central sensor lens **clockwise increases** water temperature **anti-clockwise decreases** the temperature **Wait a few moments for the temperature of the water to stabilise.**
4. The LED indicator on the front of the handwash shows when the unit is operating.
5. When you have finished handwashing, simply pass your hand in front of the central sensor lens (fig.I).
6. The handwash will also automatically turn off after approximately 40 seconds (fig.I).
- 7. DEMONSTRATE OPERATION TO USERS, AND LEAVE THIS BOOK WITH THEM FOR FUTURE REFERENCE.**

WARNING:
DO NOT SWITCH THE UNIT ON IF YOU SUSPECT IT OF BEING FROZEN. WAIT UNTIL YOU ARE SURE IT HAS THAWED OUT.

WARNING:
CONSIDERATION SHOULD BE GIVEN TO SUPERVISING THE YOUNG, ELDERLY AND THE INFIRM WHILST THEY USE THIS UNIT.

SECTION 11

MAINTAINING THE HANDWASH

WARNING:
BEFORE ANY CLEANING, SWITCH OFF AT THE ISOLATING SWITCH. CLEANING AND MAINTENANCE SHALL NOT BE MADE BY CHILDREN

It is recommend that the handwash unit be cleaned using a soft cloth and that the use of abrasive or solvent cleaning fluid be avoided.

The patented "Vortex" spray head does not require de-scaling.

SECTION 10

ENERGY RELATED PRODUCT DIRECTIVE (ErP)

Manufacturer	Redring
Product	AV3S

Consumption (kWh / annum)	167
Sound (dB)	15
Precautions	<i>Follow all product care, installation and maintenance instructions listed here</i>

GUARANTEE

Terms and Conditions for UK (outside UK contact your local distributor)

In the unlikely event of a product breakdown during the guarantee period, you should contact our Service and Repair Helpline who will be able to assist with the repair and advise of the best course of action to be taken.

Please DO NOT remove the product prior to making this call as this may invalidate your guarantee.

Service and Repair Tel: 0844 372 7766 or email: technical.services@redringxpelair.com

We guarantee this product for a period of 12 months from the date of purchase.

Within the guarantee period we will resolve, **free of charge**, any manufacturing defects in the product resulting from faulty workmanship or material on condition that:-

- a) The product has been correctly installed and commissioned in accordance with our instructions and is being used on the supply circuit or voltage printed on the rating plate.
- b) The product has been used in accordance with these instructions and has not been tampered with or otherwise subject to misuse, neglect or accident.
- c) The product has not been taken apart, modified or repaired except by a person authorised by us.
- d) Evidence of the date of purchase in the form of an invoice or receipt will be required in order to qualify under the terms of this guarantee.
- e) For the service work to be undertaken free of charge, the work must only be undertaken by Redring Xpelair Group Limited, or our approved agents.
- f) Service under guarantee has no effect on the expiry date.
The guarantee on any exchanged parts or product ends when the original guarantee period ends.

EXCLUSIONS

This guarantee **DOES NOT** cover damage or defects arising from poor or incorrect installation, improper use or lack of maintenance, including the build-up of limescale.

It is the responsibility of the installer to check that the installation parameters meet the requirements of the products, and any relevant regulations.

If we are called out to a fault, which is subsequently identified as being an installation fault, we will make a charge.

It is important that the routine checks are completed before calling us out, as many issues can be simply diagnosed and resolved.

A charge will be made where a call under the terms of the guarantee has been booked and a failure was not product related, or an engineer arrives and is not able to gain access.

We make no guarantees as to response time for repairs.

We will endeavour to achieve the most timely response possible but while we indicate an average response time, this should not be taken as a guarantee.

The guarantee applies to a repair or replacement (at our discretion) of the product subject to the conditions above, and **DOES NOT** cover compensation for the loss of the product or consequential loss of any kind.

This guarantee does not apply to the repair or replacement of pressure relief devices, sprayheads, isolating switches, electrical cable, fuses and/or circuit breakers.

This guarantee does not affect your statutory rights.
