

CLEANING INSTRUCTIONS

The DAN DRYER® baby changing station is constructed in powder-coated aluminium with stainless steel mountings.

The table requires no specific maintenance – merely regular, ordinary cleaning with mild cleaning agents.

Do not use alcohol-based cleaning agents on stainless steel parts.

It is recommended to use the DAN DRYER stainless steel care, which provides a brilliant surface and effectively protects against dirt and fingerprints.

The care product is applied to the steel parts in a thin layer with a clean, dry cloth. Avoid circular movements – always stroke along the grain polish lines.

Wipe off the excess using a dry cloth.

Hosing down the unit is not recommended, as water and cleaning agents may then flow into the mountings and gradually remove the layer of oil protecting and ensuring the mobility of the internal, mechanical bearings.
